

wherein X is oxygen or sulfur;

wherein R is selected from the group consisting of (a) C₁ to C₁₂ alkyl moieties that are terminally substituted with zero to three halogen atoms and (b) C₅ to C₇ aryl groups substituted with zero to four alkyl, haloalkyl, or alkoxy moieties;

wherein Z₁ is a moiety selected from the group consisting of aryl, aralkylene, dialkylamino, diarylamino, alkylarylamino, trialkyleneamino, cyclic amino, cyclic amido, cyclic imido, and oxy derivatives thereof; and

wherein Z₂ is a moiety selected from the group consisting of aryl, aralkylene, dialkylamino, diarylamino, alkylarylamino, trialkyleneamino, cyclic amino, cyclic amido, cyclic imido, and oxy derivatives thereof.

Remarks:

The above amendment is made not for purposes related to patentability, but to correct a typographical error in that the R moiety may be selected from the group comprising, in part, C₁ to C₁₂ alkyl moieties, not C₁ to C₂. Support for this amendment is found at lines 2-4 of page 17 of the original specification. Thus, no new matter has been added.

Respectfully submitted,

Date: February 17, 2003
